SKILLS

- JavaScript
- SQL
- Docker
- C#
- LLM fine-tuning
- Model optimization for code generation
- VS Code
- Rider
- .NET
- Generative AI
- Dynamic data visualization
- REST API integration
- UML diagrams
- System architecture
- Database development
- Web application & database backend
- Scrum
- BPMN process modelling

FAGLIG PROFIL

I am an IT architecture student with knowledge and experience through study projects and independent projects in system design, database design, and web development. Beyond my studies, I have independently worked with fine-tuning large language models, where I trained the Qwen model to improve C# code generation. This project gave me a deeper understanding of how AI models work and are optimized. I am looking for an internship in IT with a focus on AI, where I can contribute both my technical skills and my curiosity for new technologies.

PROFESSIONAL PROFILE

Air Connection | Odder
